
PICSL lab bibliography style instructions

Release 0.2

June 1, 2016

Abstract

This document contains style instructions for adding publications to the lab bibliography.

Contents

1 Introduction

This style guide must be followed to ensure that the lab bibliography maintains a consistent look and feel. For technical instructions on how to configure Jabref and upload references, see `techguide.pdf`.

2 Adding new publications

Editing the bibliography consists mostly of adding new papers. For published papers, use Jabref's web search. Use the drop down box to change the search source. If the journal or conference is listed on Pubmed, search Medline. For IEEE journals not on Medline, search with IEEEExplore. Do not use Google Scholar because the Bibtex is automatically generated and can be inconsistent.

Each article only needs to be added once. If your search returns articles already in the database, these articles will be highlighted with a "D". Do not import duplicates.

3 Adding in press articles

To add a publication that is accepted but not yet published, you will need to add an entry by hand. To do this, you should copy an existing entry from the same journal or conference. Edit the "year" field to say "In press", leave volume and pages blank. This is not valid Bibtex but it will render acceptably on the website. Of course this means you need to find and remove the entry once the paper is published. It might be better to just add in press articles manually on the website, then add the Bibtex once the paper is indexed in Medline.

4 Unlisted publications

Many conferences are not listed in Medline or IEEEExplore. We define our own standards and provide example Bibtex in the following sections. New conferences and journals can be added as necessary.

If you are the first to add a conference, you can define the style. Place the template below so others can use it.

5 ISMRM

This style follows the ISMRM's citation database in PubMed format. The ISMRM has made some Bibtex listings available, but they contain important errors including re-ordering of the authors! Use with caution. Here is the style template for importing your abstracts.

```

1 @INPROCEEDINGS{ AuthorYearISMRM ,
   author = {Author, A. and AnotherAuthor, B.} ,
3   title = {Abstract title} ,
   booktitle = {Proceedings Nth Scientific Meeting, International Society for Magnetic
5   Resonance in Medicine, City} ,
   year = {YYYY} ,
7   pages = {Abstract number goes here} ,
   abstract = {The short abstract provided for the ISMRM abstract index} ,
9   keywords = {CityAbstractNumber} ,

```

```
11 | timestamp = {YYYY.MM.DD}
```
