February 22, 2013

Penn Image Computing And Science Laboratory
University of Pennsylvania

Abstract

This document explains how to update the lab master bibliography and website.

Contents

0.1	Setup	2
1	The Git repository	2

Introduction

We maintain a lab-wide Bibtex file for multiple uses, including updating the website but also for grant applications and departmental reporting requirements. Each member of the lab needs to contribute their own publications to the bibliography, and we must all use a consistent system to avoid divergence in citation style.

0.1 Setup

To get started, perform the following one-time setup steps.

1. Register for a free GitHub account, and email your username to Phil
2. Install Jabref 2.9.2 for your platform (see section on Jabref below)

1 The Git repository

The picslbib Git repository contains the Bibtex and this document. You may clone via https or ssh, depending on how your Git is configured. To clone via https, do

```
$ git clone https://github.com/cookpa/picslbib.git
```
